Plot One

Description One

This shows how much money each candidate received. The donations are broken down into contributions from voting tendencies by state. Clinton received the most total contributions and the most from each of the state voting tendency categories.

Plot Two

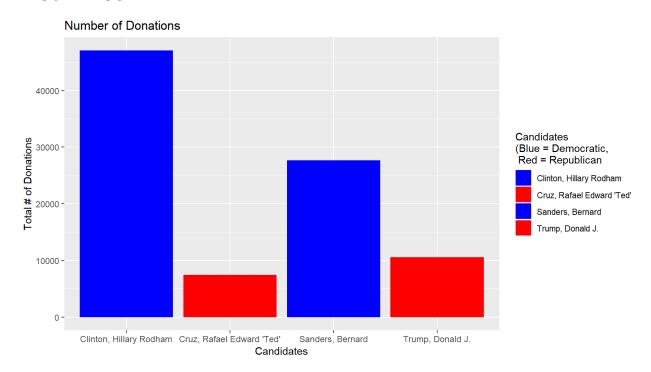

Description Two

This side-by-side shows contributions over time to Clinton and Trump. The first shows contributions by democratic leaning states. As predicted, Trump recieved a small proportion compared to Clinton.

The second shows contributions by republican leaning states. Interestingly, Clinton received a larger proprtion of these donations than I would have expected. Before the primaries ended, Clinton was receiving more donations than Trump from these states. After the primaries, Trump's donations surpassed Clintons in these states, but Clinton still held a larger proportion than expected.

Plot Three

Description Three

This shows the total number of contributions to each candidate. As predicted, Clinton received the highest number of contributions. Surprisingly, Sanders received the second highest number. This means that Sanders' average contributions were small. Democrats totaled a considerable higher number of donations.
